Standard gobos

Our standard glass gobos come in several different designs are available in halftone, black and white, or color. The standard designs are developed for use in a broad range of locations and projects. How and where you use them is only limited by your imagination.

Custom gobos

Being able to project anything you want on whatever surface you want is the greatest advantage of gobos and moving lights. Gobos can be found projecting light onto the stages of London's West End and New York's Broadway and at all kinds of exhibitions and festivals throughout the world. They are even used in museums, shopping malls and the sidewalks of local stores.

"Custom" means you can choose any photograph or picture – halftone, black and white or color – to be transformed into a gobo, regardless of size. You can add your own artwork we can do it for you. We work with printed or digital images and scale or adjust them to fit the gobo. We can even add or remove colors, texts and other effects to create the specific image you are looking for.

How to order

When ordering a customized gobo, it is important you provide us with the right format to get the best results. You can find out more about this, the different gobo sizes, and other useful information on our website.

Alternatively, you can reach out to us and we will help you.

"Viloplats" by Anna Lidberg

Gobos

A gobo is a picture/image or photograph permanent etched on heat resistant borosilicat glass to reflect and project to a surface or objects. How and where you want to use gobos is only limited by your imagination.

Why use gobos?

Signage

Make quick logistical solutions with Gobo signage. Perfect for instore, traffic or commuting.

Art installations

Add colorful art installations to make your interior or exterior walls "pop". Perfect for restaurants, museum and public places.

Communication

Make costumers see what you want to sell them. Or inspire employees with clever quotes around the office.

Projectors

Beacon is proud to offer a variety of high quality projectors perfectly adapted for gobo projection both indoor & outdoors. Choosing the right projector for your project is essential and we help you find the right one.

How to get the best results with a gobo

All our profile spotlights and moving heads can be used as projectors and light sources, and can be equipped with gobo holders as standard. They are available in a wide range of sizes to meet your projection needs.

Optical quality varies considerably between different fixtures, therefore it is important to consider the projection capabilities of a fixture when you are planning to use a gobo. The type of gobo and the way in which it will be projected will also impact the choice of fixture.

For example, if you want to use a gobo to create texture through slight blurring on a wall or backdrop, you can use almost any kind of fixture and gobo. But if you want to project a company logotype in full color with clear details, you need a fixture with high optical quality and a high resolution glass gobo.

If you need any assistance, we are happy to help you find the optimal projector and gobo to meet your requirements.

Architectural mapping

Architectural mapping can be a challenging process that requires specific tools and planning methods to match the choice of projector.

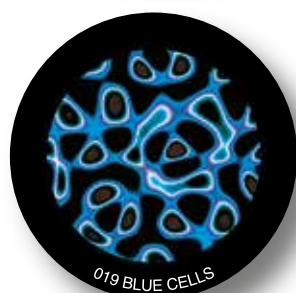

A simple circle gobo may look stunning when projected on certain fixtures i.e., if the midpoint is covered and doesn't need to be in focus. However, switch it with a photographic gobo, and it will most probably look blurry on the edges or in the center. This is because a simple optical system usually does not create a uniform focus. To avoid this, make sure you know what kind of projector you will be using, as well as what kind of gobo is required.

If you are unsure, we can provide you with the necessary support to ensure your image projections look outstanding.

All colors are stocked and come in in following sizes of 0,3 mm borosilicate glass

15 mm 20 mm 23 mm 25 mm 29 mm
34 mm 41 mm 48 mm 64mm 80 mm

All other customized sizes are available with a minimum order of 4 pcs of the same color.

Be aware that the colors may appear different on screen than projected from a light source.

Digigobos

Digigobos are a series of high standard media files that make it possible to create stunning video projections and backgrounds. Beacon Digigobos™ can be incorporated into derivative works such as live performances, films, videos, broadcasts, advertisements, websites and presentations. They are easy to use for media backgrounds or video effects in almost all media systems. And the great thing is, all the content is royalty free.

Digigobos comes in almost all formats.

DIGIGOBOS®

Custom made

For over a decade, Beacon has created virtually all the digital content – the spectacular visual scenery and effects – at the Eurovision Song Contest. Much of which, was designed and produced on location by our team.

Beacon standard and custom range moving heads, was the obvious choice for projections used during the show. The result – an amazing integrating flow of moving images and gobos tailored to bring the most out of each artist's performance.

With the introduction of real-time video manipulation systems, a new world of light design possibilities has opened up over the past years. The future looks even more exciting with all new screen solutions based on LED and other technology.

Lighting design & projects

Beacon can provide classical interior lighting and fixtures for theaters. With many years of collaboration with leading lighting manufacturers, we can also provide a complete solution for other entire lighting projects. We offer competitive pricing of high demand fixtures, including intelligent lighting systems and day-to-day work areas. Our network of light designers and installation experts guarantee you a high level of functionality and exquisite light design.

The Beacon Gobo Group is our network of independent gobo producers just waiting to help you out!
